

Simplifying Revenue Management Integrations

REVENUE MGMT. INTEGRATION SERVICE

Navitaire's Revenue Management Integration Service (RMIS) makes it easier than ever to stream events from the Navitaire Airline Platform to revenue management systems.

Navitaire's RMIS simplifies integration with your preferred revenue management system – whether in-house or through a third-party partner. It provides near real-time, actionable data and supplements pricing optimization products.

RMIS gives you the tools to transform data into more friendly, usable formats for both humans and machines.

- Tight integration with revenue management systems (e.g. Eddy from Kambr) that provide near real-time data streaming and up-to-the-minute inventory changes
- Simple configuration for individual or multi-attribute event notifications, like changes in PNRs, schedules or inventories

Revenue Management Integration Service

An integrated information system used to aggregate and stream revenue management related data, helping decision makers evaluate revenue opportunities and risks.

Sample RMIS event messages sent via JSON data interchange format:

- Flight and nest lid change
- Flight and nest capacity change
- Leg available unit (AU) change
- Route available unit (AU) change
- Leg sold change
- Journey booking change
